

TOSHIBA

Need to automate your labelling?

With the APLEX series it's easy peasy!

Automate

- Easy “plug & play” migration from manual to automatic labelling including the coexistence of both.
- APLEX is a standard out of the box solution that can be installed in typically less than 3 hours.

Save cost

- APLEX is a low-cost automatic application solution that works hassle-free with Toshiba B-EX4 and B-EX6 industrial printers.
- APLEX can print & apply up to 30 labels/min. Beware of paying too much for a complex custom-made automatic printing system.

Simple management

- An impressive industrial labelling solution, which can run 24/7 - manually and/or automatically.
- Supply management is simplified by common parts and consumables along with the same application software for all your printing processes.

Insured investment

- If you are a current owner of Toshiba B-EX series printers, you can turn them into automatic labelling systems.
- The B-EX4/6T1 are even RFID Ready, when you need to read, record and apply RFID tags.

High productivity

- Automatic labelling of up to 1,800 products per hour.
- High print speed (300 mm/sec) combined with 800 m long length ribbons and ribbon save can result in labelling runs up to 7 times longer without ribbon replacement.

Easy maintenance

- Intelligent design and the use of standard mechanisms minimise the need for maintenance.
- Field-proven robustness minimises the possibility of break-downs or downtimes.

Speaks your language

- No need to change your application; simply use your current software for your Toshiba B-EX4/6 printers to apply labels with APLEX.

APLEX - Just add air
