TOSHIBA

Web Content Security

Datasheet

> Advanced web security with robust content filtering.

> Protect local and remote users from accessing malicious links, websites and files.

> Ensure employee productivity with granular access policies for web browsing.

Protect your users and your organisation with premium web content security.
Securing traffic to and from the web is critical—but not all web security solutions are designed for the era of cloud-connected services, remote workers, and widely distributed networks.

Toshiba's Web Content Security solution is a cloud-based service that combines robust content filtering, file-based protection, granular policy enforcement and reporting, simple centralised management, and real-time threat intelligence to protect your users, your organisation and your brand. Its proxy-free architecture ensures minimal latency.

TOGETHER
INFORMATION

Robust content filtering

Toshiba's Web Content Security solution provides advanced DNS filtering and URL filtering that's always up to date, and uses agent-based filtering to ensure remote users are fully protected even when they are off the network.

Real-time threat intelligence

The solution leverages an unmatched real-time threat intelligence network, along with live heuristic analysis, to ensure that downloaded files and other traffic are free of zero-day malware and other emerging threats.

Centralised management and granular reporting

You'll have at-a-glance visibility into individual users' status and activities, and customised alerts of malicious threats are created. Highly flexible and customisable reporting options make it easy to document outcomes, identify high-risk individuals, and more.

Blanket policy enforcement

The solution makes it simple to define global, local, group-based, time-based, and individual policies, and enforces those policies transparently across all users and devices, on- or off-network. Optimise your bandwidth by limiting access to non-work-related sites and services.

Feature Comparison

Feature	Standard	Plus
Easy setup	✓	✓
Protection from web-based threats	✓	✓
Web content filtering	✓	✓
Endpoint malware protection		✓
SSL inspection		✓
Heuristic file analysis		✓
Policy based on individual user		✓
Reporting based on individual user		✓
Remote user support		✓
LDAP/Azure AD support		✓
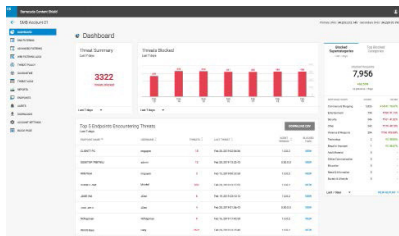

| Get at-a-glance visibility into blocked threats and website categories
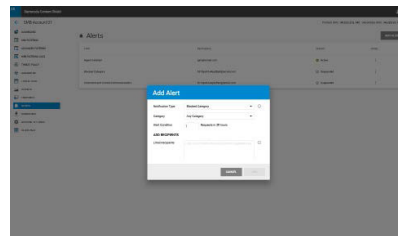

| Create custom alerts and block pages
